

Integrating REMI with Additional Programs

Regional Economic Models, Inc.

what does REMI say? sm

Agenda

Introduction

REMI Command Line Interface

Command Line Interface Example

ArcGIS Integration in the REMI model

Visualization in ArcGIS

Conclusion

Command Line Interface

The PI+ command mode function allows for seamless integration with other applications by enabling policy simulations and data exports through a command line interface. It automates the process of loading simulations, importing policy variables, running forecasts, and exporting results without requiring user input.

- Supports automation by running forecasts and exporting results without user prompts.
- Capable of importing policy variables from files, running forecasts, and exporting data in various formats.
- Allows users to specify simulation details, such as forecast years and regional controls.
- Can be called from other applications via batch files, Visual Basic, or other Windows programming languages.
- Can be enabled for any of REMI's products

Various syntaxes available depending on what the user wants to run, including the following:

- -OpenOnly opens control or simulation, if one exists with given name.
- -CustomList=CustomListName names a Favorite to be exported "
- -ExportNames AltExportFileName Specifies the name and location of the export file
- -RunTo= specifies the year to which the forecast will run
- **-Control** specifies the control that will be used as the driving control. (if not selected and the simulation is saved, the first alternative control is the driving control.)
- -Save="Simulation Name" saves the new object to the file with the given name.
- -ExportFormat: Available formats are; Excel, CommaText (default), TabText, XML and HTML.

Example: to open the "PolicyVariables.xml" PV export file, run it to 2040, save it as "Simulation Name", and export the file to Excel: PIPLus -RunSim -RunTo=2040 - save="Simulation Name" -ExportFormat EXCEL PolicyVariables.xml

After entering this into the command prompt, it will open PI+, import the file, run the simulation, save the file, and then save the Excel export file within the "Exports" folder of the model directory.

Agenda

Introduction

REMI Command Line Interface

Command Line Interface Example

ArcGIS Integration in the REMI model

Visualization in ArcGIS

Conclusion

GIS provides a framework for visualizing data.

This can be historical or descriptive data.

For forecasting and analysis, need a link between forecasting/analysis model or other tool.

This presentation shows the link between the REMI TranSight model and ArcGIS.

The Approach

TranSight has a comprehensive economic/demographic forecast.

GIS base year has population and other indicators at the parcel level.

The TranSight forecast is used to "drive" changes in variables at the parcel level.

TranSight users can develop simulation forecasts based on long-range planning objectives and transportation/land use policy changes.

GIS visualizes potential paths for metropolitan development at the parcel level.

REMI TranSight

REMI Model Linkages (Excluding Economic Geography Linkages)

REMI

REMI TranSight

General equilibrium model with employment and demographics determined in simultaneous equation system.

Demographics driven by economic conditions (employment opportunity and compensation rates); complete cohort-component model by age/gender/race, special populations (military, college students); retirement migration. Driven by retirement age population of the US.

Further, simulation capabilities to look at alternatives based on transportation network changes, land use policies, and other factors.

Linking of Land Use to NAICS Codes

- Export ArcGIS attribute table to Excel
- Create key between land use codes associated with the shape file and associated NAICS codes

LUCODE	DESCRIPTION	NAICS Code	NAICS Description	DEFINITION (of colum
1000	Spaced Rural Residential			Single family homes lo
1090	Spaced Rural Residential Without Units			Parcels of land that do
1100	Single Family Residential			
1110	Single Family Detached			A single-unit structure
1120	Single Family Multiple-Units			A single-unit attached
1190	Single Family Residential Without Units			Parcels of land that do
1200	Multi-Family Residential			Multiple dwelling units
1280	Single Room Occupancy			For Rent SROs provide
1290	Multi-Family Residential Without Units			Parcels of land that do
1300	Mobile Home Park			Includes mobile home
1400	Group Quarters			Group living accommod
1401	Jail/Prison	N/A	State and Local Government	
1402	Dormitory	61	Educational services; private	School associated grou
1403	Military Barracks	N/A	Federal Military	Group living accommod
1404	Monastery	813	Religious, grantmaking, civic, p	professional, and similar organ
1409	Other Group Quarters Facility	N/A	State and Local Government	Convalescent or retirer
1500	Hotel/Motel/Resort			
1501	Hotel/Motel (Low-Rise)	721	Accommodation	Hotels, motels, and oth
1502	Hotel/Motel (High-Rise)	721	Accommodation	Hotels and motels that
1503	Resort	721	Accommodation	Resorts with hotel acco
2000	Heavy Industry			
2001	Heavy Industry	3364-3369	Manufacturing	Shipbuilding, airframe,
2100	Light Industry			
2101	Industrial Park	3364-3369	Manufacturing	Office/industrial uses c
2103	Light Industry - General	3364-3369	Manufacturing	All other industrial uses
2104	Warehousing	493		Usually large buildings
2105	Public Storage	493		Public self-storage built
2200	Extractive Industry			
2201	Extractive Industry	212		Mining, sand and grave
2300	Junkyards/Dumps/Landfills			
2301	Junkyard/Dump/Landfill	562	Waste management and	The landscape should s
4100	Airports			
4101	Commercial Airport	481	Air transportation	Lindbergh Field only.
4102	Military Airport	481	Air transportation	Airports owned and ope
4103	General Aviation Airport	481	Air transportation	All general aviation airr
4104	Airstrip	481	Air transportation

Join REMI Employment Data with Shape File

- Join the employment data by NAICS code to the shape file data using the NAICS-land use key
 - In the screenshot to the right, the third column represents the total employment change for that NAICS code, and the fourth column is the employment change for that specific parcel
- This can also be done for simulations to determine the employment change by parcel

OID_	-	NAICS	Employment i	Employment_Value
	336	813	23	0.000181321

Weighting by Industry Parcel Square Footage

- Determine each parcel's square footage as a percentage of the total square footage of each industry
- Multiply this percentage by the total employment change for that particular industry
 - Example (baseline employment data):
 - > Parcel 4408 NAICS code: 713 (Amusement, Gambling, and Recreation industry)
 - Shape area: 256,234 sq ft
 - ▶ Parcel square footage as % of total (which is 36,089,295 ft²) for NAICS 713: 0.71%
 - NAICS 713 employment: 24,345 * 0.71% = 181 jobs in parcel 4408 from the Amusement, Gambling, and Recreation industry

Weighting by Industry Parcel Square Footage

- Add a field of the shape file within ArcGIS for the employment by parcel
- Copy the employment by parcel calculations to the new field created in the shape file
- Use the "Symbology" feature within ArcGIS to create a color coded map showing the magnitude of employment impacts by parcel

Visualizing REMI baseline employment for San Diego within ArcGIS

Baseline employment by parcel (2021)

Symbol	-	Upper value 🛛 🐣	Label
	*	≤ 0.003792	0.000000 - 0.003792
	*	≤ 0.014527	0.003793 - 0.014527
	•	≤ 0.03767	0.014528 - 0.037670
	*	≤ 0.24566	0.037671 - 0.245660
	*	≤ 0.994954	0.245661 - 0.994954

Key (thousands of jobs)

Google map of San Diego for reference

Obtaining employment data for specific parcels

- Land use code of 2001 (Heavy Industry) corresponds to the NAICS code of 3364-3369 (Manufacturing) based on the land use to NAICS mapping
- 2021 employment: 86
- 2040 employment: 66
- This actual parcel in San Diego corresponds to NASSCO, a General Dynamics shipbuilding/ship repair yard

Obtaining employment data for specific parcels

- Land use code of 5003 (Community Shopping Center) corresponds to the NAICS code of 44-45 (Retail Trade) based on the land use to NAICS mapping
- 2021 employment: 173
- 2040 employment: 161
- This actual parcel in San Diego corresponds to a shopping center including a Walmart and Best Buy

Visualizing REMI simulation results within ArcGIS – Incorporating REMI forecast years

2021

2040

 Importing different years of the REMI forecast allows for visualization of how employment changes over time

Additional REMI-ArcGIS Integration - Population

- In addition to visualizing employment data, other REMI variables can be integrated with ArcGIS, assuming data availability in the shape file, such as population by parcel
- Based on the residential land use type the average number of people per household can be assigned based on the number of units in that land use code, which is then used to determine a percentage that each parcel represents of the population
- The actual population value is then multiplied by these percentages to determine the number of people for each parcel

		Population (select desired age and year below)													
iber eople parcel		1) Select age cohort:	Age 48

Other Applications

- Using other ArcGIS layers in conjunction with REMI results can help with utility and transportation planning
- Based on what components are available in the shape file, spreading of REMI results variables can be further customized

Conclusion

- The REMI model can be used in conjunction with other models in order to streamline and to enhance the analysis
- The Command Line Interface allows for automation of simulation runs and data exporting
- ArcGIS shape files can be linked to results within the REMI model in order to explore visualization tools and to allow for sub-county analysis
 - Visualization can be customized based on how detailed components are in the shape file (such as land use code detail, housing types, parcel square footage, etc.)
- Using other ArcGIS layers such as utility data along with forecast data can help planners forecast future needed utility expansion

Thank you for attending!
